

Ticket ID	Alert Message	Severity	Details	Ticket status
A-2703	SERVER-MAIL Phishing attempt possible download of malware	Medium	The user may have opened a malicious email and opened attachments or clicked links.	Escalated ▾

Ticket comments
Alert reviewed and determined to be a true positive phishing attempt. The email claims to contain a resume and cover letter but includes the executable attachment <code>bfsvc.exe</code>, whose SHA-256 hash is identified as known malicious. Additional phishing indicators include a mismatch between the sender display name and sign-off name, an unusual Re : subject line, spelling errors, a password-protected attachment, and suspicious sender infrastructure. Recommend escalation to verify whether the file was downloaded or executed, isolate the affected endpoint if necessary, quarantine the email, and block the associated indicators.

Additional information

Known malicious file hash:

Subject: Re: Infrastructure Egnieer role

Dear HR at Inergy,

I am writing for to express my interest in the engineer role posted from the website.

There is attached my resume and cover letter. For privacy, the file is password protected. Use the password paradise10789 to open.

Thank you,

Clyde West
